EDUCATION

University of Victoria

Bachelor of Science in Computer Science (Honours) | GPA: 8.14/9.0

Victoria, BC

Expected April 2027

Relevant Coursework: Data Structures & Algorithms, Communication & Networking, Database Systems, Data Mining

EXPERIENCE

University of Victoria

Teaching Assistant, Database Systems

Victoria, BC

September 2026 - December 2026

- Mentor 13 student teams through a term-long database project, reviewing proposals for scope and schema complexity and advising on data modelling, SQL, transactions, and authentication

Reliable Controls

Software Developer Intern

Victoria, BC

January 2026 - August 2026

- Reduced MFC GDI resource usage by ~75% (8,000+ objects to ~2,000) in a critical workflow, eliminating native Windows resource leaks
- Built a C++/MFC connection-cancellation dialog that let users immediately abort stalled connection attempts, eliminating 30–60 second timeout waits
- Built a CEF-powered HTML/SVG reporting system that generates high-resolution, print-ready visualizations of controller I/O
- Prototyped an XML-to-SQLite configuration migration using Entity Framework Core, including schema migrations and data synchronization

Software QA Analyst Intern

September 2024 - April 2025

- Designed and optimized TestRail test workflows, validating 100+ functional and non-functional test cases
- Streamlined API testing and integration validation workflows with Bruno, increasing reliability and adherence to API specifications, while reducing API validation errors by 20%
- Cut QA review-cycle time by 30% by optimizing test workflows and introducing automation, improving sprint velocity

One Nation

Software Developer (Part-time)

Remote (Vancouver, BC)

April 2025 - July 2025

- Built a natural language-driven reporting pipeline using OpenAI API and PostgreSQL, enabling users to generate custom insights in under 20 seconds
- Implemented a Laravel Filament password-reset workflow with token validation, expiration handling, and secure credential updates
- Developed custom WordPress plugins to extend core CMS functionality, integrate with third-party APIs, and deliver performance-tuned solutions based on client-specific requirements

PROJECTS

DoNext | Next.js, TypeScript, FastAPI, PostgreSQL

[GitHub](#)

- Built an adaptive semester-planning platform with user-scoped APIs that models courses, deadlines, commitments, goals, sleep, and availability for dynamic scheduling
- Engineered a PDF/DOCX/TXT ingestion pipeline that extracts schedules and deadlines from course documents into structured planning data
- Integrated the OpenAI API to convert users' free-text replanning notes into structured scheduling constraints, which the planner uses to automatically rebuild the schedule

GROWTH | React Native, Expo, TypeScript, Supabase

[Live](#) | [GitHub](#)

- Built and launched a live strength analytics platform with 7 active users, enabling workout logging and long-term strength progression analysis
- Developed a custom performance-scoring engine combining estimated 1RM, training volume, and fatigue resistance
- Implemented Supabase authentication and persistent workout data, alongside friend leaderboards, exercise-specific PR tracking, and progress visualizations

TECHNICAL SKILLS

- Programming Languages:** C++, C#, Python, Java, JavaScript/TypeScript, SQL, C, PHP, HTML/CSS
- Frameworks and Libraries:** MFC, .NET, React, React Native, Next.js, Node.js, FastAPI, PyTorch, Entity Framework Core
- DevOps and Tools:** Git, Docker, Linux, CI/CD, Microsoft Azure, Google Cloud Platform, AWS (EC2, S3, Lambda, RDS)
- Databases and Backend:** PostgreSQL, SQLite, Supabase
- Project Management and Collaboration:** Jira, Confluence, Scrum, Agile
